

Installation: I have been sent a new version of Muse Proxy. How do I install it into my current version of Muse?

Follow these steps to install the new Muse Proxy version:

- stop the Muse Proxy
- delete the content of the `${MUSE_HOME}/proxy/cache` directory. IMPORTANT: Do not delete the directory itself, only its content.
- copy and dearchive the attached file "proxy.zip" in `${MUSE_HOME}` directory
- start the Muse Proxy
