

Sources: Why do I get different results for the same search on the same Source Package in the Muse Admin interface and in the the application?

Please make sure that you did not set any default search options in the application, since these will be applied to any search, transparently to the user - they can be seen only if the the Search Options window is accessed.

These options could limit the number of records retrived by the Source Package while the same search from the Muse Admin interface will no apply any limits. This way, the two identical (same term, same Source Package) searches could lead to different results.
