

Sources: What is the order of preference for which stylesheet will be read from the Muse directory? If a stylesheet with the same name is present in \$APPLICATION_HOME/stylesheets/connectors, /sources/lib, and in the jar file, which one is read?

The stylesheet is selected in the following order:

- 1) The ISR translator is first loaded from the location which is specified in the <ISR> field of the source's profile (typically from \$APPLICATION_HOME/stylesheets/connectors).
- 2) If the translator is not found at that location, it is loaded from the SP at the Application level (located under \$APPLICATION_HOME/sources/lib).
- 3) If this is not found then the translator is loaded from the global Source Package (located under \$MUSE_HOME/use/modules/sources/lib).
