

Sources: Only the first 10 digits of the new 13 digit ISBN are shown in records retrieved from some Sources. How can we get the full 13 digit number to display?

The ISBN-13 was truncated in displays of Source Packages using the Z39.50 protocol. This issue has been addressed, and both the ISBN-10 and ISBN-13 formats are now fully supported in the latest versions of all Source Packages. The updated Source Packages are available in the Source Factory. If you encounter this problem in an Application, update the affected Source Packages to the latest versions and the problem will be resolved.

Unique solution ID: #1058
